Career Summary :

Skilled front-end engineer with over three years of experience and a master's degree in information systems.
Developed a cloud-based SaaS eCommerce application used by 60+ organizations in four countries as their online store.
Detail-oriented, fast learner with expertise in Javascript frameworks, SPA, e-commerce and supply chain and proficiency in Angular, React and Node.
Leveraged skills to build a viable product in eight months while maintaining the code quality. Seeking to bring fast, intelligent solutions to a leading company, in which I can improve the bottom line while pursuing my career goals.

Experience

2016 - present

Senior Engineer

eComchain

- Developed eComchain, a MEAN stack-based, e-commerce cloud application that caters to B2B and B2C enterprises.
- Enhanced end-to-end core B2B and B2C functionalities (modules) on the client (**Angular controllers, directives, filters and factories**) and server (**Node routes, views, services and Mongoose models**) and ensured testing (**Mocha, Karma**).
- Designed **React Components (Containers and Presentation) with Redux** and devised a design pattern to inject them into Angular directives.
- Drafted the initial system architectural plan, including server setup on AWS, file structure scaffolding, defining static routes on **Express** and rendering the view using Nunjucks.
- Established **RESTful public (API) and private (Routes) Web Services using Express Router in JSON** data-interchange format.
- Designed the application data structure schema and data modeling process for **MongoDB using Mongoose**.
- Directed the Solr indexing engine to deliver improved search capabilities (Filters, facets, type-ahead, spell check) by 65%.
- Led a 11 member front-end team and interfaced with the off-shore team and on-site team as a liaison.

2014 - 2015

IT Analyst Intern

iBizSoft Inc.

- Created user stories, models and approaches to resolve issues.
- Maintained efficient workflow with global teams and created performance scorecards to detect anomalies and trends.
- Conducted analysis, configuration and maintenance for Oracle Cloud applications like Sales Cloud, Marketing Cloud (Eloqua), Social Cloud (SEM), Service Cloud (RightNow CX) and Commerce Cloud (OCC).
- Boosted the functionality of Oracle CRM with Oracle SRM with E-business suite using RESTful and SOAP web services.
- Generated revenue by converting leads to sales through client meetings, which involved general discussion, requirement gathering and proposing solutions.
- Upgraded the storefront for Magento.
- Streamlined Demandware for effective customer targeting, product catalog, searching/suggestions, user experience and payment and shipping best practices.
